        Creating scripts that are temporarily executed.

        Ensuring maintenance on scripts created by myself and other colleagues

        Back-end maintenance (formulas, API integration, optimization)

        Front-end maintenance (correct information display, css javascript code optimization, and images on all LPs that I create but also site pages, etc.)

     Projects :

        www.bitdefender.com (back-end & front-end)

Position : Web developer

Employer: Happy Digital

Period: Aug 2015 – Dec 2016

At Happy Digital we worked on CakePhP 2 / 3. A framework that I'm using at the moment and I am very excited about how it works.

Programing languages : PHP , JS , SQL , HTML , CSS

Additional skills : CakePHP 2/3 , Jquery , MySQL

Daily tasks:
At this company, he had the project from the beginning. Generally, all of the websites I've been doing were for some campaigns of consumer products (Santal, Coca-Cola, Heineken, etc.). When I received the project documentation, I started creating the database + its structure, preparing the framework (I had a basic framework from which I went to work because I needed a part of the administration, which of course suffered some changes during but I used the theme on the front end), integram template received from my colleagues in PSD format, and after that I did everything about the functionality of the site.
Projects :

        www.salvezpadurea.ro (back-end & front-end)
        www.fordbdt.ro (back-end & front-end)
        www.ford-proleasing.ro (back-end & front-end)
        www.christianhope.ro (back-end & front-end)

Position : Web developer

Employer: MarkUp Media

Period: May 2014 – Aug 2015

At Mark Up Media we worked on Wordpress.

Programing languages : PHP , JS , SQL , HTML , CSS
